object's velocity. Mon, 03 Dec 2018 05:56:00 GMT jogger moves in equal time intervals, you can determine ... - no acceleration in the horizontal direction so the x-component of velocity remains constant for the entire time of flight. The vertical motion is not constant velocity. IT IS ACCELERATED! It is the same as a free falling object. with the acceleration of gravity. Time is the key that ties the motions together! Fri, 23 Nov 2018 22:08:00 GMT Chapter 3 - 3 Accelerated Motion CHAPTER Practice Problems 3.1 Acceleration pages 57-64 page 61 1. A dog runs into a room and sees a cat at the other end of the room. The dog instantly stops running but slides along the wood floor until he stops, by slowing down with a constant acceleration. Sketch a motion dia- Tue, 04 Dec 2018 04:01:00 GMT CHAPTER 3 Accelerated Motion - Mr. Nguyen's Website - the constant acceleration due to gravity. In projectile motion, the horizontal motion and vertical motion are independent of each other, i.e. they do not affect each other. This feature allows us to break the motion into two separate one-dimensional problems: one for the horizontal motion; the other for the vertical motion. Chapter 3 Accelerated
Motion Figure 3-1 By
noting the distance the
jogger moves in equal time
intervals, you can determine
that the jogger is standing
still (a), moving at a
constant speed (b), speeding
up (c), and slowing down
(d). Changing Velocity You
can feel a difference
between uniform and
nonuniform motion.
Uniform motion feels
smooth. Section/Objectives

Guide. Kinematics:
Acceleration . Acceleration
is the rate-of-change of
velocity.. Average
Acceleration () is the ratio
of the change in its velocity
over the time elapsed in the
process. Whenever an object
speeds up or slows down,
its velocity changes size
and it has an acceleration
along, or tangent to, the
path traveled. AP Physics
